

DAMADA
GROUP

Land Remediation

Building on extensive experience in the Asbestos Removal Industry, Damada Group is a rapidly growing, multi-disciplined contractor that can provide comprehensive solutions to issues faced within the development process. With services including full site investigation (including Asbestos Surveying, Sampling and Analysis), Licensed Asbestos Removal and Demolition Services, Damada Group aims to provide our clients with a full turnkey service which keep safety and quality at the centre of all that we do.

At Damada Group, we provide a range of cost effective solutions for contaminated land and groundwater, as well as site analysis and site clearance. This can form part of a demolition project or as a stand-alone service for the redevelopment of brownfield sites.

Working with our experienced management and analysis team, our highly skilled and qualified operatives will remove any ground contaminants such as oil, chemicals, asbestos or harmful and invasive plants (e.g. Japanese Knotweed and Giant Hogweed) to leave your site in prime condition for future development.

The team has access to a fleet of excavators and all the latest technically advanced plant and

equipment which means we can undertake any decontamination project, regardless of size and complexity. In addition, our laboratory analysts can identify the exact contaminants present within the soil or groundwater, meaning you don't need to pay for the disposal of contaminants unnecessarily i.e. those not present within your site.

Through the combination of a dedicated management team, modern equipment and experienced project supervisors, Damada Group can ensure your project is completed to the highest quality, on-time and within budget.

Services include:

- Contaminated Land Surveying
- Soil and Groundwater Remediation
- Asbestos Contaminated Land Remediation
- Japanese Knotweed and Giant Hogweed Removal
- Foundation Removal
- Landscaping, Seeding and Planting Services
